

Cylinder Barricade Racks:

Structural Tube Design racks are recommended for indoor or outdoor bulk cylinder storage. STD series racks surround cylinders with 2 inch square steel tube continuously seam welded and sealed with exterior grade powder paint. Two levels of welded steel chains with snaps for each cylinder. Standard and custom configurations from one to 16 or more cylinder capacity, up to 12 inch diameter standard or 33 inch cryogenic cylinders. Units meet or exceed UFC, NFPA, CGA, and OSHA, as well as Seismic Zone 4 requirements. Optional process rail models add 2 controls mounting struts. Firewall barriers are rated 1 hour fire resistance by encasing Marinite I™ barrier material in 14 gauge steel panels. Fire barriers can be installed freestanding or attach to racks. Ships motor freight.
